SECTION 1

Purpose of This Guide

This guide provides instructions for assessors reviewing **VTCCORP.US** within **Control HUB**, the CMMC Compliance Readiness & Evidence Management Platform operated by Carme Technology.

The Assessor role is **read-only**. It provides external reviewers with full visibility into controls, evidence, System Security Plan (SSP) narratives, monitoring records, Plan of Action and Milestones (POA&M) items, and documentation — without the ability to modify any system records.

▮ Scope

This guide covers navigation, screen-by-screen instructions for every Control HUB area, a complete 10-step control review example, assessment checklists for key review areas, troubleshooting, and support contact information for VTCCORP.US.

SECTION 2

Assessor Access Overview

The **Assessor** role provides read-only access to VTCCORP.US's compliance data. It is designed for external CMMC assessors performing Third-Party Assessment Organization (C3PAO) reviews.

Area	Permission	Details
Dashboard	Read Only	Compliance score, domain readiness, overdue items, and activity timeline
Controls Library	Read Only	All 110 CMMC L2 controls with assessment status and evidence counts
Implementation Tab	Read Only	Self-assessment status and implementation narrative per control
Configure Tab	Read Only	Step-by-step implementation verification procedures
Evidence Tab	Read Only	All approved evidence — preview and download linked files
Monitoring Tab	Read Only	Recurring operational activities linked to each control
POA&M Tab	Read Only	Open gap remediation items linked to each control

Area	Permission	Details
SSP Tab	Read Only	System Security Plan narratives per control
Evidence Repository	Read Only	Global searchable evidence list — preview and download files
Documentation	Read Only	Policies, procedures, logs, and compliance records
Monitoring Tracker	Read Only	19 recurring operational monitoring activities
POA&M Register	Read Only	Complete list of open gaps and remediation plans
Assessor Page	Read Only	Dedicated assessor control list with assessment package view
Write Actions	No Access	All create, edit, upload, approve, and delete operations are blocked

SECTION 3

What the Assessor Can Do

The Assessor role provides comprehensive read access to the entire compliance record for VTCCORP.US:

- View the **Compliance Dashboard** — readiness score, domain progress, evidence health, monitoring status, and activity timeline
- Browse and search the **Controls Library** (all 110 CMMC L2 controls)
- Read **Implementation Narratives** for each control — the organization's self-assessment
- Review the **Configure tab** — step-by-step implementation and verification procedures
- View linked **Evidence** per control — status, type, collection date, owner, and assessor summary
- **Preview and download evidence files** — PDFs, images, text files, DOCX, and XLSX
- Access the **Evidence Repository** — globally searchable evidence list with filters
- Review **Monitoring activities** per control — linked recurring operational reviews
- View **POA&M items** per control — documented gaps with risk level and remediation plans
- Read **SSP narratives** per control — formal System Security Plan documentation
- Access **Documentation** — policies, procedures, logs, and compliance records

- View the **Monitoring Tracker** — all 19 recurring operational activities with completion status
- Review the **POA&M Register** — complete list of all open and closed remediation items
- Use the **Assessor Controls Page** — a dedicated assessment interface
- Use the **Help Center** — in-app user guide and FAQ

SECTION 4

What the Assessor Cannot Do

The Assessor role is strictly read-only. The following actions are blocked at the API level — they are not merely hidden in the UI:

- Add, edit, or delete evidence items
- Upload files or attachments of any kind
- Change assessment status, evidence status, or document status
- Edit implementation narratives or control records
- Edit SSP content
- Update or edit the Monitoring Tracker
- Create, edit, or close POA&M items
- Create or manage user accounts
- Access Settings or Security Center
- Access User Management or Organization settings
- Connect external systems or run automated scans
- Delete any records

Read-Only Enforcement

The system blocks all write operations for the Assessor role at the API level. If you encounter a UI element that appears to allow editing, please report it to the VTCCORP.US administrator and to info@carmetechnology.com.

SECTION 5

Logging In

Control HUB uses email/password authentication. Multi-factor authentication (MFA) may be required. Your assessor credentials will be provided by the VTCCORP.US compliance administrator.

- 1 Open your browser and navigate to the Control HUB URL provided by VTCCORP.US.

- 2 Enter your assigned **assessor email address**.
- 3 Enter your assigned **password**.
- 4 Click **Sign In**.
- 5 If MFA is required, open your authenticator app and enter the 6-digit TOTP code.
- 6 Upon successful login, the **Compliance Dashboard** for VTCCORP.US loads automatically.

Login Assistance

If you cannot log in, are locked out, or have not received credentials, contact:
info@carmetechnology.com or the VTCCORP.US compliance administrator.

SECTION 6

Selecting VTCCORP.US

Control HUB supports multiple organizations in a single platform. After login, confirm that **VTCCORP.US** is the active organization shown in the top-left of the sidebar.

Figure 6.1 — After login, confirm the sidebar header shows "VTCCORP.US" as the active organization before beginning your assessment review.

If the wrong organization is displayed, click the organization name in the sidebar to open the switcher, then select **VTCCORP.US**.

i Org Scope

All data — controls, evidence, documents, monitoring, POA&Ms — is scoped to the active organization. If your assessor account has access to only one organization, it will be pre-selected automatically.

SECTION 7

Dashboard Overview

The **Compliance Dashboard** provides a summary of VTCCORP.US's overall CMMC readiness. Review it at the start of your assessment to understand the organization's current compliance posture.

Figure 7.1 — The VTCCORP.US Compliance Dashboard. KPI cards show overall readiness, evidence health, monitoring status, POA&M health, and domain-level breakdown.

Dashboard Element	What It Shows	Assessor Notes
Overall Readiness	% of controls with approved evidence	Starting point — note this number and compare to domain breakdown
Controls Status	Implemented / In Progress / Not Started / N/A counts	Not Started controls require investigation — is the gap acknowledged?
Evidence Health	Approved, Pending, Stale, Archived counts	Stale evidence on active controls is a potential finding
Monitoring	Current, Due Soon, Overdue monitoring counts	Overdue items indicate sustainment gaps
Open POA&Ms	Open, In Progress, Closed POA&M counts	High-risk overdue items are material findings
Domain Readiness	Per-domain compliance across all 14 CMMC L2 domains	Domains below 80% need focused attention during your review
Recent Activity	Recent compliance actions — evidence changes,	Note any evidence approved within 30 days of assessment — verify it predates the

Dashboard Element	What It Shows	Assessor Notes
	assessments	assessment notice

SECTION 8

Controls Library

Navigate to **Controls** to view all 110 CMMC Level 2 controls. Use search and domain filters to systematically review each CMMC domain.

Assessor Tip

Search by exact CMMC control ID (e.g., **AC.L1-3.1.1**) for the fastest lookup. The search bar matches on control ID, title, and domain name.

Control ID	Title	Domain	Level	Status	Evidence
AC.L1-3.1.1	Authorized Access Control	Access Control	L1	Implemented	0 / 0
AC.L1-3.1.2	Transaction and Function Control	Access Control	L1	Implemented	1 / 1
AC.L1-3.1.20	External Connections	Access Control	L1	Not Started	0 / 0
AC.L1-3.1.22	Control Public Information	Access Control	L1	Not Started	0 / 0
AC.L2-3.1.3	CUI Flow Control	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.4	Separation of Duties	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.5	Least Privilege	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.6	Non-Privileged Account Use	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.7	Privileged Function Auditing	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.8	Unsuccessful Login Attempts	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.9	Privacy and Security Notices	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.10	Session Lock	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.11	Session Termination	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.12	Remote Access Monitoring	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.13	Remote Access Encryption	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.14	Remote Access Routing	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.15	Remote Access Authorizations	Access Control	L2	Not Started	0 / 0
AC.L2-3.1.16	Wireless Access Authorization	Access Control	L2	Not Started	0 / 0

Figure 8.1 — The VTCCORP.US Controls Library. All 110 CMMC L2 controls with assessment status badges and evidence counts.

Controls Library Column Reference

Column	Description	Assessor Notes
Control ID	CMMC identifier (e.g., AC.L1-3.1.1) — click to open Control Package	Use exact ID for lookup; searchable
Title	Plain-language requirement name	Keyword searchable if ID is unknown

Column	Description	Assessor Notes
Domain	One of 14 CMMC L2 domains (AC, IA, CM, SC, SI, etc.)	Filter to systematically review by domain
Level	L1 (17 foundational) or L2 (all 110)	L1 controls must all be implemented as foundational requirements
Status	Implemented / In Progress / Not Started / Not Applicable	Not Started on an in-scope control = gap
Evidence	Count of linked evidence items	Implemented status + 0 evidence = finding

Search & Filter Options

- **Search box** — Control ID, title keyword, or domain name
- **Domain filter** — Restrict to one of 14 CMMC domains for systematic review
- **Level filter** — Show only L1 (foundational) or all L2 controls
- **Status filter** — Show Implemented, In Progress, Not Started, or Not Applicable controls

⚠ **Status Interpretation**

A control marked **Not Started** indicates the control has not been formally self-assessed by VTCCORP.US. Note these controls in your findings. For controls marked **Not Applicable**, verify the justification in the control detail before accepting the classification.

☐ **Controls Library Review Checklist**

- ☐ Locate each in-scope control by exact CMMC ID
- ☐ Verify Implemented controls have at least one evidence item (Evidence count > 0)
- ☐ Filter by Not Started to identify all unassessed controls
- ☐ Filter by Not Applicable — verify each has a written justification in the control detail
- ☐ Note domains with less than 80% readiness for focused evidence review

SECTION 9

Control Package Review

Clicking a control ID opens the full **Control Package** — the complete assessment view for a single CMMC requirement. Each package contains multiple tabs presenting the self-assessment, implementation guidance, evidence, monitoring records, POA&M items, and SSP narrative.

9.1 — Implementation Tab

The **Implementation tab** is the primary assessment tab. It contains VTCCORP.US's written statement of how they implement this CMMC control in their environment.

Figure 9.1 — The Implementation tab for control AC.L1-3.1.1 showing the self-assessed status and VTCCORP.US's implementation narrative.

Implementation Tab Fields

Field	Description	Assessor Significance
Control Description	Official CMMC requirement text	The standard against which the narrative is evaluated

Field	Description	Assessor Significance
Assessment Status	Implemented / In Progress / Not Started / Not Applicable	Core finding indicator
Implementation Narrative	VTCCORP.US's written statement of how the control is addressed	Primary narrative evidence — evaluate specificity, accuracy, and alignment with evidence
Last Assessed	Date the status was last updated	Very old dates may indicate stale self-assessment

Narrative Quality

A complete narrative should describe the specific **systems** used, the **process owners** responsible, the **frequency** of recurring activities, and the **evidence sources** that demonstrate implementation. A generic or one-sentence narrative is a finding.

Implementation Tab Checklist

- ☐ Narrative is present (not blank)
- ☐ Narrative is specific to VTCCORP.US — names systems and process owners
- ☐ Narrative references actual tools, platforms, or documented procedures
- ☐ Implementation status matches narrative content (Implemented = detailed narrative; Not Started = blank is expected)
- ☐ Save/Edit buttons are not visible (confirming read-only mode is enforced)
- ☐ Narrative aligns with the linked evidence in the Evidence tab

9.2 — Configure Tab

The **Configure tab** provides step-by-step implementation guidance — the intended configuration approach, expected evidence artifacts, and validation steps. It documents how the control was expected to be configured.

Figure 9.2 — The Configure tab showing implementation approach, required configuration steps, and expected evidence artifacts for AC.L1-3.1.1.

- **Implementation Approach** — systems or platforms used to implement the control
- **Configuration Steps** — ordered instructions for setting up the control
- **Evidence to Capture** — what artifacts should exist as evidence of completion
- **Required Documents** — policies or procedures that must be in place
- **Validation Steps** — how to verify the control is working as intended

i Assessor Use of Configure Tab

Use the Configure tab to understand what VTCCORP.US intended to implement. Cross-reference with the Evidence tab — expected artifacts listed here should exist as evidence items. Steps listed without corresponding evidence are gaps to investigate.

⚠ Read-Only

Assessors cannot check off, edit, or modify configuration steps. All Configure tab content is view-only.

9.3 — Evidence Tab

The **Evidence tab** lists all evidence artifacts linked to this specific control — the artifacts VTCCORP.US is presenting to support their implementation claim.

Figure 9.3 — The Evidence tab listing all linked evidence for AC.L1-3.1.1 with status, type, collection date, and preview/download options.

Evidence Tab Columns

Column	Description
Title	Descriptive name — click to open the Evidence Detail page
Type	Policy, Procedure, Screenshot, Log, Certificate, Report, Access Review, Scan Report, etc.
Status	Lifecycle state — focus on Approved, Active, and Assessor Ready for assessment
Collected Date	When the evidence was gathered or generated
Owner	VTCCORP.US team member responsible for this artifact

Evidence Review Workflow

- 1 Click the control ID in the Controls Library to open the Control Package.

- 2 Select the **Evidence tab** below the control header.
- 3 Review all listed evidence records — title, type, status, and collection date.
- 4 Focus on items with status **Approved**, **Active**, or **Assessor Ready**.
- 5 Click any evidence title to open the Evidence Detail page with full metadata and file preview.
- 6 Use the preview panel or **Download** button to review the actual artifact.
- 7 Confirm the evidence content directly supports the implementation narrative in the Implementation tab.

The screenshot displays the 'Evidence Detail' page for a control titled 'Access Control Policy — v2.1'. The page is part of the 'Control HUB' interface for 'VTCCORP.US'. A left-hand navigation menu includes options like Dashboard, Controls, Evidence (selected), Monitoring Tracker, POA&Ms, Documentation, SSP, Reports, Help & User Guide, and Settings. At the bottom of this menu is an 'Assessor' role indicator. The main content area features a breadcrumb trail 'Access Control Policy — v2.1' with an 'Approved' status tag. Below this, a note states 'Evidence - Policy' and 'New evidence starts as Draft until reviewed or approved.' The page is organized into several sections: 'Details' containing fields for Title ('Access Control Policy — v2.1'), Evidence Type ('Policy'), Status ('Approved'), Description ('Formal Access Control Policy establishing requirements for user account management, role-based access, and privileged account controls at VTCCORP.US.'), Collection Date ('01/15/2026'), and Expiration / Review Date ('01/15/2027'). A 'Notes & Summary' section includes an 'Assessor Summary' ('Policy document covering authorized access, least privilege, and periodic review requirements.') and 'Internal Notes' ('Internal team notes...'). On the right side, there are two panels: 'Linked Controls' (showing 'No controls linked') and 'Ownership' (listing 'OWNER: Assessor', 'UPLOADED: 7/3/2026', and 'EXPIRES: 1/15/2027').

Figure 9.4 — Evidence detail page showing metadata, assessor summary, file preview panel, linked controls, and collection/expiration dates.

□ Evidence Tab Checklist

- At least one evidence item exists for this control
- Primary evidence has status: Approved, Active, or Assessor Ready
- Collection date is within the expected review period (not stale)
- Evidence type is appropriate for the control requirement
- Evidence title is descriptive — not generic (e.g., 'Screenshot1')
- File can be previewed or downloaded without error
- Evidence content directly supports the implementation narrative
- Evidence owner is identified

9.4 — Monitoring Tab

The **Monitoring tab** shows recurring operational activities linked to this specific control. Controls requiring ongoing review (vulnerability scanning, access reviews) will have associated monitoring items here.

Figure 9.5 — Monitoring tab showing recurring operational activities linked to AC.L1-3.1.1 with frequency and status.

Column	Description
Task	Name of the recurring monitoring activity
Frequency	Required review cadence: Daily, Weekly, Monthly, Quarterly, or Annually
Last Completed	Date the activity was most recently completed
Next Due	When the activity is next scheduled
Status	Current / Open / In Progress / Overdue

Overdue Status

An **Overdue** monitoring item indicates a recurring operational activity has not been completed on schedule. This represents a CMMC sustainment gap — document it as a potential finding.

Monitoring Tab Checklist

- ☐ Relevant monitoring activities exist for controls requiring recurring review
- ☐ Status is Current for all required monitoring activities
- ☐ Last Completed date is within the expected frequency window
- ☐ Overdue items are documented and noted as potential gaps

9.5 — POA&M Tab

The **POA&M tab** shows remediation items linked to this specific control. A Plan of Action and Milestones (POA&M) formally acknowledges a gap and commits to a remediation timeline.

Figure 9.6 — POA&M tab showing open remediation items linked to AC.L1-3.1.1.

Field	Description
POA&M Number	Unique identifier (e.g., POAM-2026-001)
Weakness / Gap	Description of the identified deficiency
Risk Level	High Medium Low
Status	Open / In Progress / Closed
Owner	Responsible party for remediation
Target Date	Planned completion date

POA&M Tab Checklist

- ☐ All open POA&M items for this control are visible
- ☐ Risk level is defined for each item
- ☐ Owner is assigned for each item
- ☐ Target date is present and not in the past without closure
- ☐ High-risk items with overdue target dates are documented as findings
- ☐ Closed POA&Ms — verify the closure is legitimate (look for closure evidence)

9.6 — SSP Tab

The **SSP tab** contains the System Security Plan narrative for this control — the formal, SSP-format description of how VTCCORP.US implements the requirement within their documented system boundary.

Figure 9.7 — SSP tab showing the formal System Security Plan narrative for AC.L1-3.1.1.

- **SSP Narrative** — The formal SSP-format implementation statement for external use
- **Control Status** — Should align with the Implementation tab status

i SSP vs. Implementation Narrative

The SSP tab and Implementation tab may contain similar content. The SSP represents the formally documented SSP narrative; the Implementation tab is the working assessment record. Compare both — inconsistencies may indicate the SSP has not been kept current.

SSP Tab Checklist

- ☐ SSP narrative is present (not blank)
- ☐ Narrative is specific to VTCCORP.US's systems and processes
- ☐ Narrative is not generic or copy-paste template text
- ☐ Narrative aligns with the Implementation tab narrative
- ☐ Narrative references actual systems, tools, or documented procedures
- ☐ SSP control status matches the Implementation tab status

SECTION 10

Example: Reviewing AC.L1-3.1.1 — Step-by-Step Walkthrough

This section walks through a complete 10-step control review for **AC.L1-3.1.1**. Use this as a template for your full assessment of all in-scope controls.

- 1 Navigate to Controls** — click **Controls** in the left sidebar. The Controls Library loads.
- 2 Search for AC.L1-3.1.1** — type **AC.L1-3.1.1** in the search box. Confirm the status and evidence count before opening.
- 3 Open the control** — click the **AC.L1-3.1.1** link. The Control Package opens with the Implementation tab active.
- 4 Read the implementation narrative** — in the Implementation tab, read VTCCORP.US's narrative. Verify it describes specific systems, process owners, and frequencies. Note any generic or missing content.
- 5 Review the Configure tab** — click Configure. Review the implementation approach and expected evidence artifacts. Note any steps with no corresponding evidence.
- 6 Review the Evidence tab** — click Evidence. Review all linked records. Focus on Approved, Active, or Assessor-Ready items. Note missing or stale evidence.
- 7 Open and review an evidence item** — click an evidence title. Review the metadata (type, status, collection date, owner, assessor summary). Use the preview panel or Download to review the artifact itself.

- 8 **Review the SSP tab** — return to the control and click SSP. Compare the SSP narrative to the implementation narrative. Note any discrepancies.
- 9 **Check Monitoring and POA&M** — click the Monitoring tab. Verify monitoring activities are Current. Click the POA&M tab. Review any open remediation items.
- 10 **Document your observations** — record findings in your external assessment tool or worksheet. Contact the VTCCORP.US administrator if additional information is needed.

Repeat for Each In-Scope Control

Use this 10-step process for each control in your assessment scope. Use the Controls Library search and domain filter to work through each CMMC domain systematically.

SECTION 11

Evidence Repository

Navigate to **Evidence** in the sidebar for the global evidence repository — a searchable list of all evidence for VTCCORP.US.

Figure 11.1 — The Evidence Repository showing all VTCCORP.US evidence with search, filter, type, status, and linked control information.

Filter Options

- **Search** — find by title, control ID, tag, or summary keyword
- **Status filter** — Approved, Active, Assessor Ready, or all statuses
- **Type filter** — Policy, Screenshot, Report, Log, Certificate, etc.
- **Domain filter** — Show evidence linked to a specific CMMC domain
- **Owner filter** — Filter by evidence owner

□ Evidence Repository Checklist

- ☐ Evidence records exist (repository is not empty)
- ☐ Majority of evidence has status: Approved, Active, or Assessor Ready
- ☐ Evidence types are appropriate for CMMC requirements
- ☐ Collection dates are recent (check for stale evidence older than 12 months without re-review)
- ☐ Evidence items are linked to specific controls (not floating unlinked records)

Documentation

Navigate to **Documents** to access VTCCORP.US's formal compliance document library — policies, procedures, logs, and records.

Figure 12.1 — The All Documents page listing VTCCORP.US's policies, procedures, logs, and records with linked controls and status.

Document Type	Description
Policy	Formal organizational policies (e.g., Access Control Policy, Incident Response Policy)
Procedure	Step-by-step operational procedures implementing the policies
Log	Completed periodic compliance review log instances
Record	Formal compliance records (training completion, risk assessments)

Documentation Review Checklist

- ☐ Required policies exist and are in Active status (Access Control, Incident Response, Configuration Management)
- ☐ Active documents have current effective dates — not expired
- ☐ Procedures exist for key operational processes required by CMMC
- ☐ Log instances exist demonstrating regular completion of required reviews
- ☐ All critical documents are linked to relevant CMMC controls

SECTION 13

Monitoring Tracker

Navigate to **Monitoring** in the sidebar to review VTCCORP.US's 19 recurring operational monitoring activities required for CMMC Level 2 sustainment.

Figure 13.1 — The Monitoring Tracker showing all 19 recurring CMMC L2 activities for VTCCORP.US with frequency, status, last completed date, and next due date.

Column	Description
Activity	Recurring monitoring task name
Control	CMMC control this activity supports
Frequency	Weekly / Monthly / Quarterly / Annually
Last Completed	Date most recently completed
Next Due	Scheduled next due date
Status	Current = done on time Open = pending Overdue = past due date

☐ Monitoring Tracker Checklist

- ☐ All activities show a Last Completed date consistent with their frequency
- ☐ No activities are in Overdue status (each Overdue item is a potential finding)
- ☐ High-frequency activities (weekly/monthly) are consistently Current
- ☐ Notes field provides context for completed activities where applicable

SECTION 14

POA&M Register

Navigate to **POA&M** in the sidebar to review all known compliance gaps and their formal remediation plans.

Figure 14.1 — The POA&M register listing all open and in-progress remediation items for VTCCORP.US with risk level, owner, and target completion date.

Field	Description
POA&M Number	Unique identifier (e.g., POAM-2026-001)
Title / Weakness	Brief description of the identified gap
Risk Level	High Medium Low
Status	Open / In Progress / Closed
Owner	Person responsible for remediation
Target Date	Planned completion date
Linked Control	CMMC control the POA&M addresses

POA&M Review Checklist

- ☐ All open POA&M items are visible
- ☐ Each item has a defined risk level (High/Medium/Low)
- ☐ Each item has an assigned owner
- ☐ Each item has a target completion date
- ☐ High-risk items with past-due target dates are documented as findings
- ☐ In-Progress items show evidence of active remediation (recent progress notes)
- ☐ Closed POA&Ms — verify closure is supported by evidence

SECTION 15

Assessor Controls Page

Navigate to **Assessor** in the sidebar for a dedicated assessment interface. This page provides a structured view of all controls optimized for C3PAO review.

Figure 15.1 — The Assessor page providing a structured control list and assessment package view for external C3PAO reviewers.

i Assessor Page Purpose

The Assessor page provides a clean, assessment-focused view of the control inventory. Use it as an alternative to the full Controls Library when you want a streamlined assessment interface.

SECTION 16

Recommended Assessor Workflow

Follow this structured 10-step workflow to systematically review VTCCORP.US's CMMC compliance posture:

- 1 Log in to Control HUB** — use your assigned assessor credentials. Complete MFA if prompted. (Section 5)
- 2 Confirm VTCCORP.US is selected** — verify the org name in the sidebar top-left. Switch if needed. (Section 6)
- 3 Review the Dashboard** — note the overall readiness score, overdue monitoring items, and open POA&Ms. (Section 7)
- 4 Open the Controls Library** — click Controls. Use domain and status filters to work through CMMC domains systematically. (Section 8)
- 5 For each in-scope control: open the Control Package** — review Implementation → Configure → Evidence → Monitoring → POA&M → SSP tabs. (Section 9)
- 6 Open and review evidence** — for each linked evidence item, review the detail page. Preview or download the file. Confirm it supports the narrative. (Sections 9.3 and 11)
- 7 Review the Evidence Repository** — use the global Evidence list to get a full picture of evidence health. (Section 11)
- 8 Review the Monitoring Tracker** — note any Overdue activities as potential sustainment gaps. (Section 13)
- 9 Review the POA&M Register** — note open items, high-risk items, and any past-due target dates. (Section 14)
- 10 Contact support if needed** — for access issues, missing data, or additional information. (Section 18)

SECTION 17

Troubleshooting

Issue	Likely Cause	Resolution
Cannot log in	Incorrect credentials or account not yet created	Verify email/password. Contact the VTCCORP.US administrator to confirm the account exists.
Cannot see VTCCORP.US	Assessor account not added to the organization	Contact the VTCCORP.US compliance administrator to verify org membership.
Control shows "Not Found"	Stale URL or incorrect control ID	Navigate to Controls → search by ID rather than using a direct URL.
Evidence preview not loading	Unsupported format or large file	Click Download to save locally and open in the appropriate application.
Download blocked	Browser pop-up blocker	Allow downloads from the Control HUB domain in your browser settings.
All controls show Not Started	Different org selected or no assessments recorded	Confirm VTCCORP.US is selected in the Organization Switcher.
Evidence repository appears empty	Active filter hiding items or wrong org selected	Clear all filters. Confirm VTCCORP.US is the active organization.
Session expired	JWT token expires after 24 hours	Log in again using your assessor credentials.
Access too broad (seeing other orgs)	Account may have admin role instead of assessor	Contact the VTCCORP.US administrator to verify the role is set to Assessor.
Configure tab empty	Control has no implementation guidance defined	Check the Implementation tab for manual implementation notes.
